AIKIA.WALLET / THE MATHS, MADE SIMPLE

Three numbers run this business.

We build everything ourselves and already own the phones and laptops. So the only real cost is the online software. This page shows why we can't go bankrupt, how many cafes we need, and when the money becomes good. Price: Rs 1,500 a month + GST per cafe.

Rs 8,664

NUMBER 1: OUR MONTHLY BILL. All the software, system and security. The same for 1 cafe or 150.

Rs 1,485

NUMBER 2: WHAT WE KEEP FROM EACH CAFE a month (Rs 1,500 minus about 1% payment fee; the GST goes to the government).

6 cafes

NUMBER 3: BREAK-EVEN. Bill divided by what each cafe pays us. From cafe 6, every cafe is profit.

The whole business in one line. Profit a month = (number of cafes x Rs 1,485) minus Rs 8,664. That's it.

Why we can't go bankrupt. Our worst case is zero cafes for a whole year. That costs Rs 1,03,968 a year: the software bill. Keep that amount aside and nothing else can sink us. There is no rent, no salary bill and no loan in this model.

1 / NUMBER 1: THE BILL

Everything we pay every month

Software	What it does	A month	A year
Vercel Pro	Runs the website, dashboards, staff scanner, guest pages	Rs 1,920	Rs 23,040
Supabase Pro	Database, ledger, logins, daily backups	Rs 2,400	Rs 28,800
Apple Developer	Apple Wallet cards (US$99 a year)	Rs 792	Rs 9,504
Open-Meteo commercial	Weather data for weather-mood messages	Rs 2,784	Rs 33,408
GitHub Team (2 users)	Keeps our code private and protected	Rs 768	Rs 9,216
Total bill		**Rs 8,664**	**Rs 1,03,968**

Free, and enough for us: Google Wallet API, Apple push updates, Email (Resend free), Automation and backups (GitHub Actions, Cloudflare R2), Security shield and DNS (Cloudflare), Password manager (Bitwarden, 2 users).

Customers cost nothing. Google and Apple charge nothing per wallet card. A cafe with 100 customers and a cafe with 500 cost us the same. More cafes don't raise the bill until about 150 cafes, when the database needs an upgrade (about Rs 6,000 more a month).

Left out, as you asked: development (we build it), phones and laptops (we own them), lawyer and CA fees, travel and physical work. GST on the software is left out too, because as a GST-registered business we claim it back.

Even cheaper while we have no paying cafe

Until the first cafe pays, we can demo on the free Vercel and Supabase plans and pay only Apple (about Rs 792 a month). Switch to the paid plans the day the first cafe pays.

2 / THE MATHS

How many cafes, how much money

Every row uses the same sum: cafes x Rs 1,485, minus the bill.

Cafes	Money in a month	Software bill	Profit a month	Profit a year	Each founder a month
1	Rs 1,485	Rs 8,664	**-Rs 7,179**	-Rs 86,148	Rs 0
3	Rs 4,455	Rs 8,664	**-Rs 4,209**	-Rs 50,508	Rs 0
6	Rs 8,910	Rs 8,664	**Rs 246**	Rs 2,952	Rs 123
10	Rs 14,850	Rs 8,664	**Rs 6,186**	Rs 74,232	Rs 3,093
25	Rs 37,125	Rs 8,664	**Rs 28,461**	Rs 3,41,532	Rs 14,230
50	Rs 74,250	Rs 8,664	**Rs 65,586**	Rs 7,87,032	Rs 32,793
74	Rs 1,09,890	Rs 8,664	**Rs 1,01,226**	Rs 12,14,712	Rs 50,613
100	Rs 1,48,500	Rs 8,664	**Rs 1,39,836**	Rs 16,78,032	Rs 69,918
150	Rs 2,22,750	Rs 8,664	**Rs 2,14,086**	Rs 25,69,032	Rs 1,07,043
200	Rs 2,97,000	Rs 14,664	**Rs 2,82,336**	Rs 33,88,032	Rs 1,41,168

Read it like this

- **Cafes 1 to 6** pay the software bill.
- **Every cafe after that** puts about Rs 1,485 a month in our pocket, and about Rs 17,820 a year.
- **74 cafes** = about Rs 1 lakh a month profit (Rs 50,000 each for two founders).
- **100 cafes** = about Rs 1,39,836 a month. **200 cafes** = about Rs 2,82,336 a month.

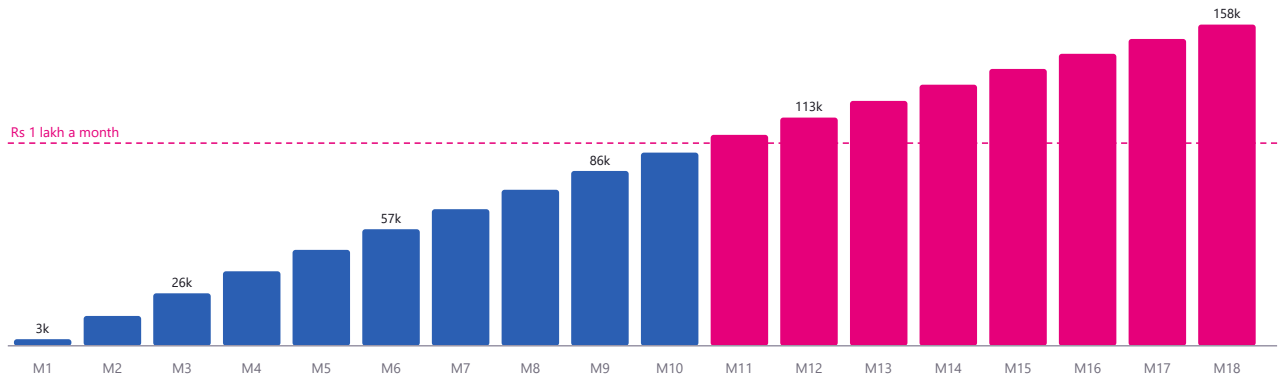

> **Before tax.** If the founders take this as salary, it is a company cost and the company pays little or no tax on it; personal tax at Rs 6 lakh a year each is likely nil under the new regime. Confirm with your CA.

3 / AFTER LAUNCH

When the money becomes good

If we sign 2 cafes a week (8 a month) and 3 in every 100 cafes leave each month:

Profit each month after the software bill (8 new cafes a month)

Month	Cafes	Money in	Software bill	Profit
Month 1	8	Rs 11,880	Rs 8,664	**Rs 3,216**
Month 2	16	Rs 23,404	Rs 8,664	**Rs 14,740**
Month 3	23	Rs 34,581	Rs 8,664	**Rs 25,917**
Month 4	31	Rs 45,424	Rs 8,664	**Rs 36,760**
Month 6	45	Rs 66,143	Rs 8,664	**Rs 57,479**
Month 9	64	Rs 94,949	Rs 8,664	**Rs 86,285**
Month 11	76	Rs 1,12,741	Rs 8,664	**Rs 1,04,077**
Month 12	82	Rs 1,21,238	Rs 8,664	**Rs 1,12,574**
Month 18	113	Rs 1,67,131	Rs 8,664	**Rs 1,58,467**
Month 24	138	Rs 2,05,359	Rs 8,664	**Rs 1,96,695**

- **Month 1:** already above the bill with 8 cafes.
- **Month 11:** profit passes Rs 1 lakh a month.
- **First 12 months together:** about Rs 7,27,990 profit.

> **The only job: sell 2 cafes a week and keep them happy.** Faster selling moves every date earlier; at 1 cafe a week the Rs 1 lakh month comes later (about month 27), but we still never lose money after cafe 6.

4 / THE RULES

Five rules so we never go into loss

1. **Keep Rs 1,03,968 in the bank** before launch: one full year of the software bill. With it, even zero sales can't hurt us.
2. **Get 6 paying cafes first.** Until then, stay on free plans for demos.
3. **One price, no discounts:** Rs 1,500 + GST a month, or Rs 18,000 + GST a year.
4. **Ask for yearly payment first.** One yearly cafe pays the software bill for about 2 months.
5. **Watch one number every month: cafes.** If it goes up, profit goes up. If cafes leave, find out why that same week.

> **Check the bill every 6 months.** Prices are in US dollars; if the rupee weakens by Rs 5, the bill rises by about Rs 451 a month. Still tiny next to what 74 cafes bring in.

Sources: Vercel Pro US$20, Supabase Pro US$25, Apple US$99 a year, Open-Meteo US$29, GitHub Team about US$4 a user: AIKIA.WALLET Launch Costing (sources listed there), checked 19 Oct 2026. Selling speed and leaving rate are planning estimates.
